

Frameless Internal Website Builder (V1) - PRD

1. Objective

Membuat sistem internal untuk membangun website client dengan cepat, konsisten, dan tanpa coding berulang.

2. Core Principle

Semi-builder berbasis section, bukan drag-and-drop bebas. Fokus pada speed, consistency, dan usability.

3. Users

Admin, Editor/Designer, Developer (optional).

4. Core Features

4.1 Website Instance

1 client = 1 website. Terhubung dengan clients dan projects.

4.2 Page System

Multi-page system dengan slug dan homepage flag.

4.3 Section-Based Builder

Section types: Hero, Services, Portfolio, Testimonial, CTA, Contact, Custom. Disimpan dalam JSON.

4.4 Inline Editor

Klik langsung edit text, image, CTA. Tanpa styling kompleks.

4.5 Global Brand Control

Gunakan site_settings untuk logo, warna, font, social media.

4.6 CMS Integration

Reuse services, portfolio_items, testimonials untuk dynamic section.

4.7 Contact System

Gunakan contact_submissions untuk form input.

4.8 Project Integration

Website terhubung ke project sebagai deliverable.

4.9 Publish System

Draft, Preview, Publish dengan preview URL.

4.10 Admin Panel

Manage website, pages, sections, content, media.

5. Tech Architecture

Frontend: Next.js, Tailwind. Backend: Supabase. Rendering: ISR.

6. UI/UX Flow

Left panel: sections, Center: preview, Right panel: editor.

7. MVP Scope

Website CRUD, Page system, Section JSON, Editor, Publish.

8. Avoid Mistakes

Jangan over-engineer, jangan buat Webflow clone.

9. Strategy

Mulai dari template-based builder untuk speed production.

10. Next Steps

Finalize DB → Build renderer → Build editor → Integrate project.
